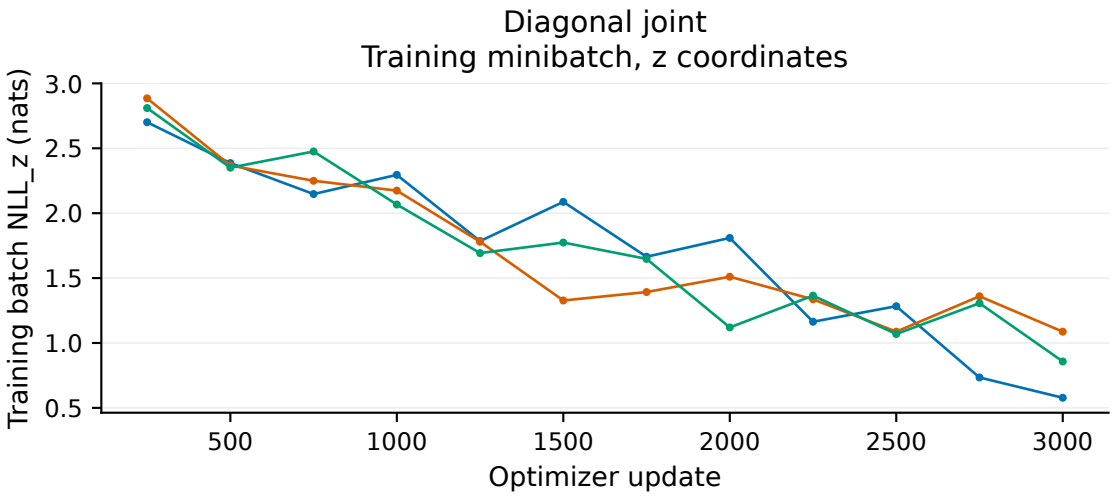
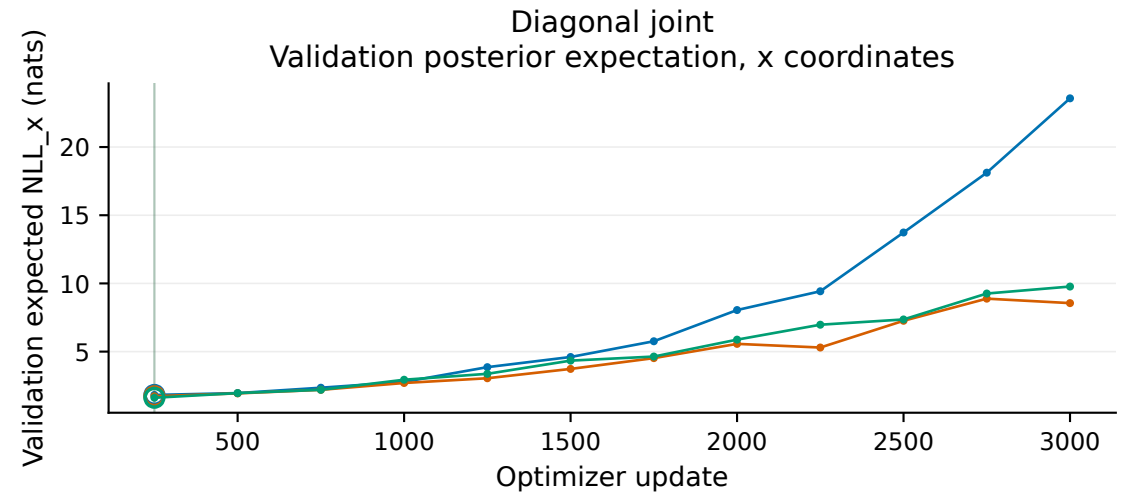
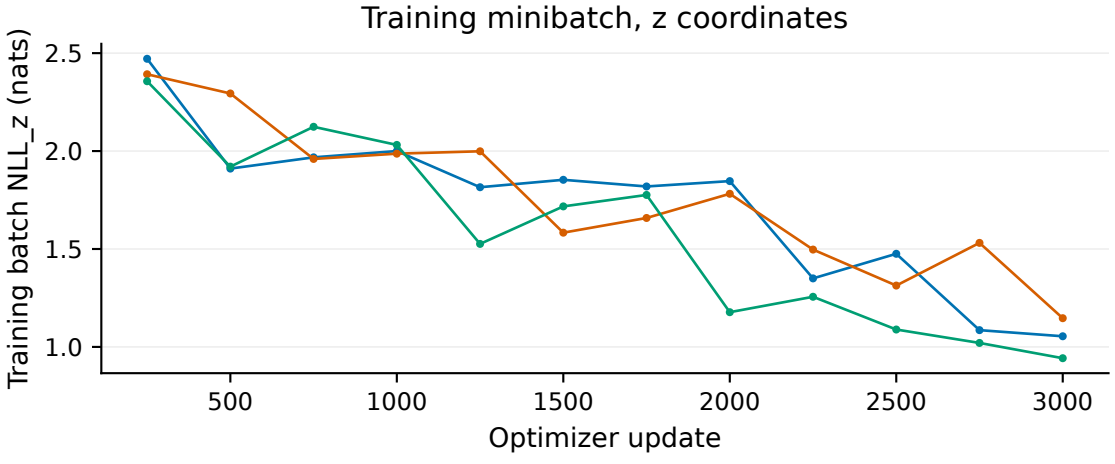
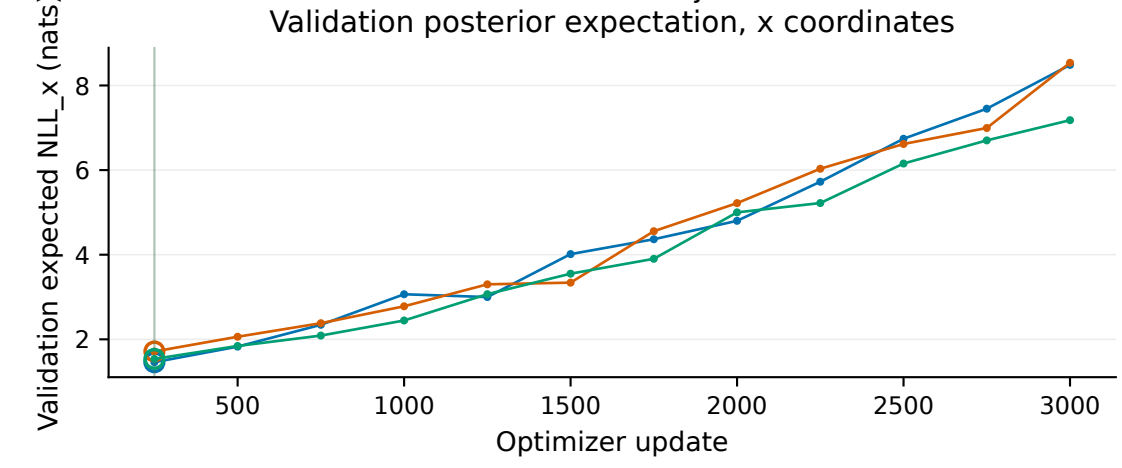
P0 exposed regression: optimization histories, all three seeds

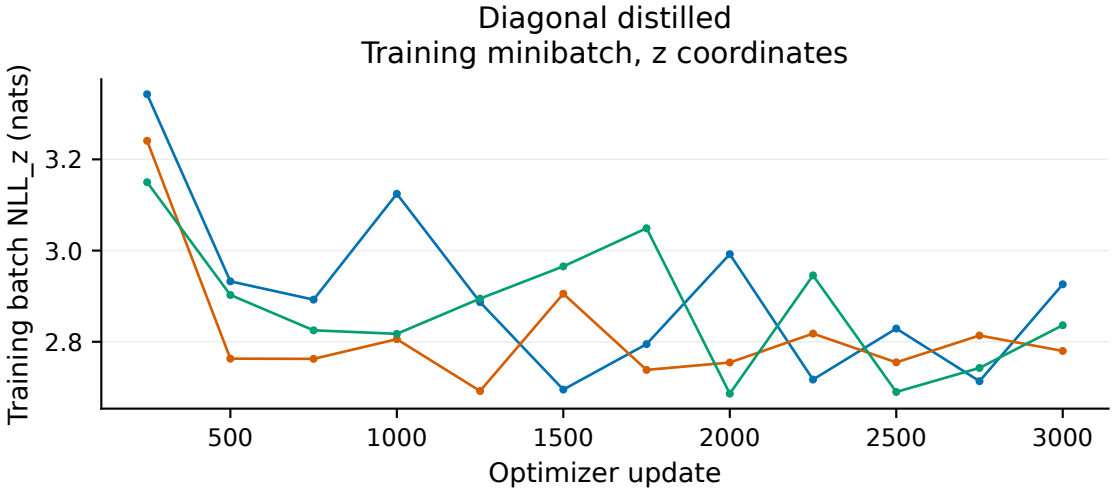
Training seed 2610131 · Training seed 2610132 · Training seed 2610133 · Selected expected-NLL checkpoint

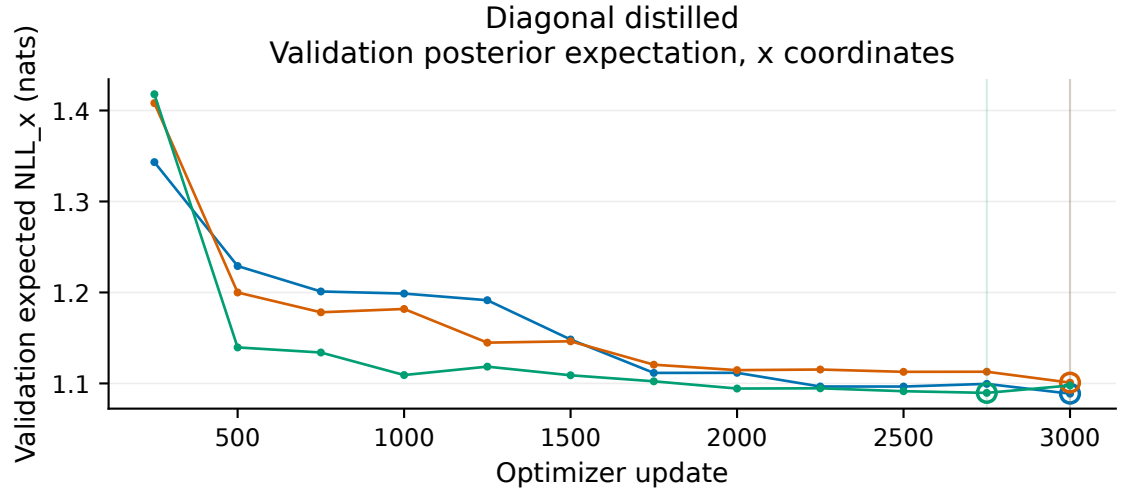


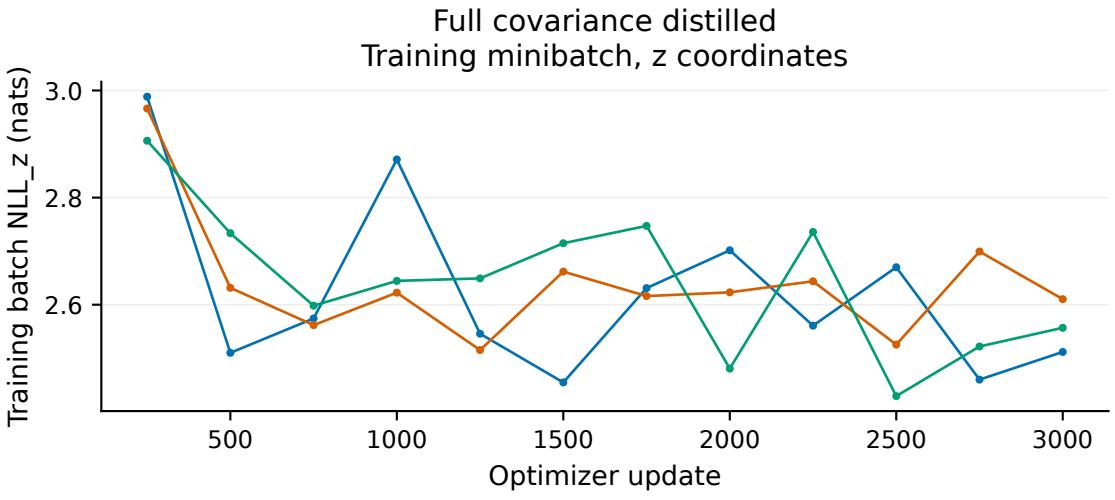


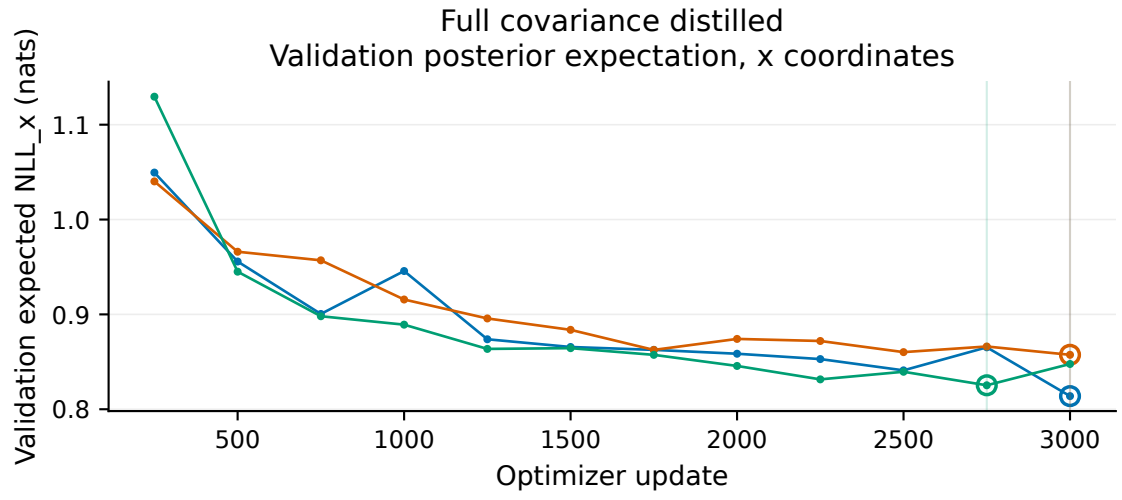












Left and right use different variables and separate y axes: NLL_z and NLL_x differ by the transformation Jacobian.
Training values are individual stochastic minibatches; validation values are posterior expectations. Absolute gaps are not comparable.
No averaged-seed confidence band and no new model or physical evaluation are used.
