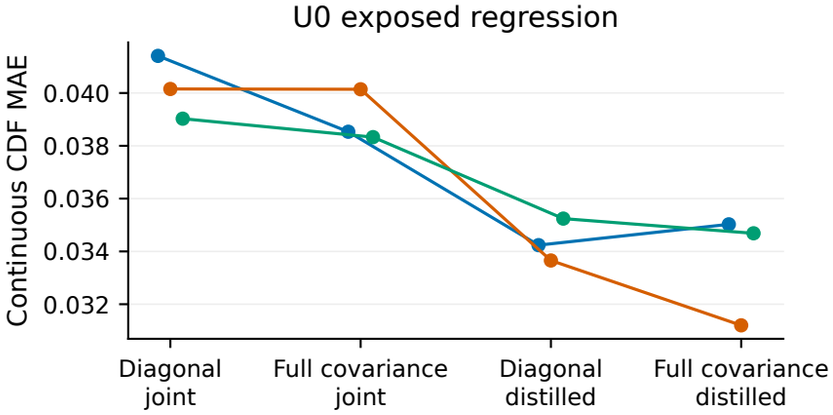
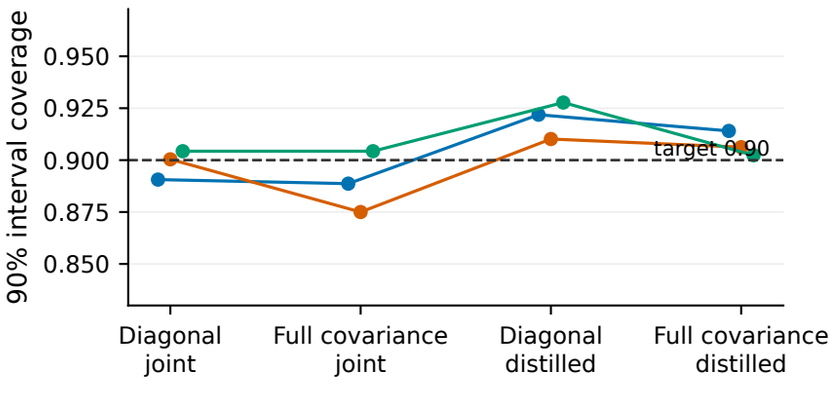
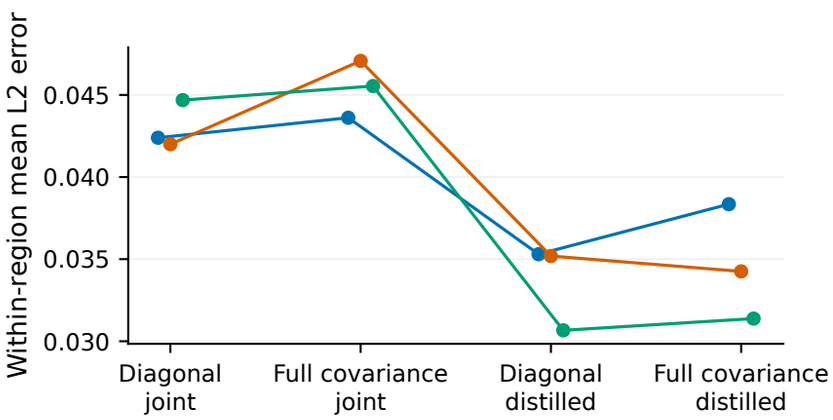
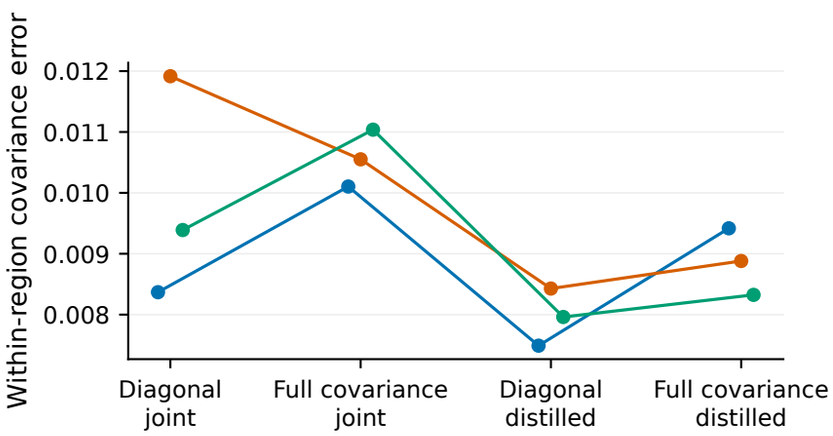
U0 exposed regression

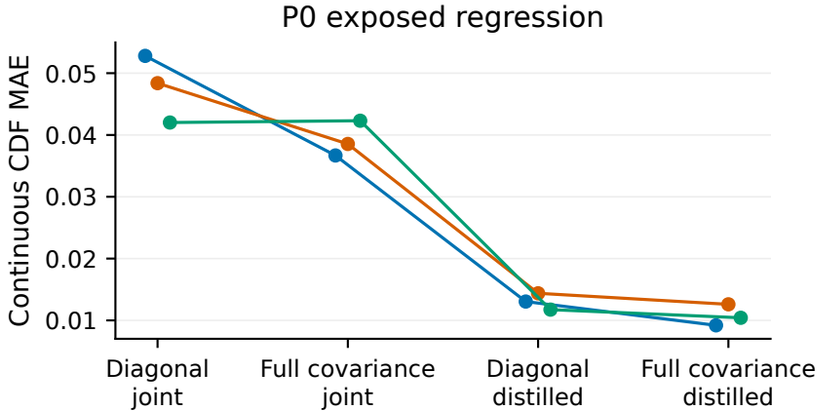


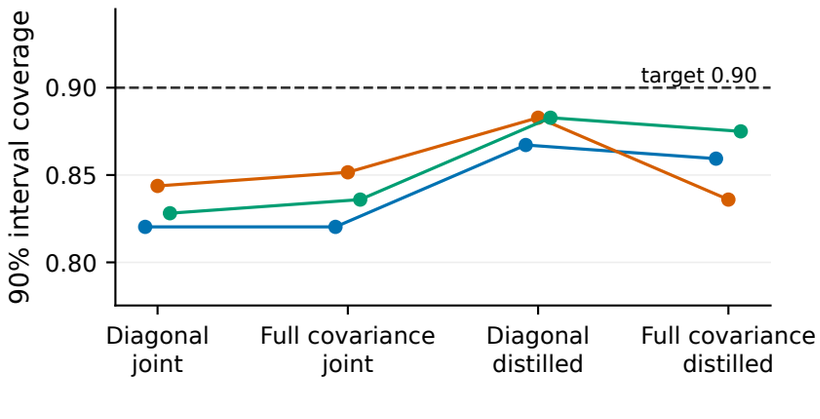


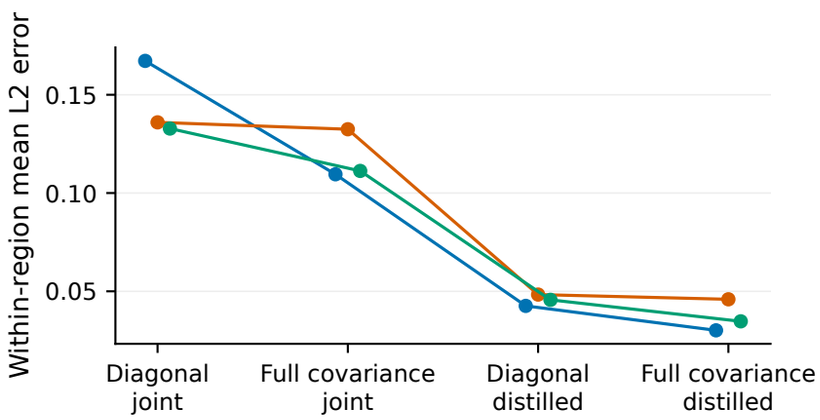


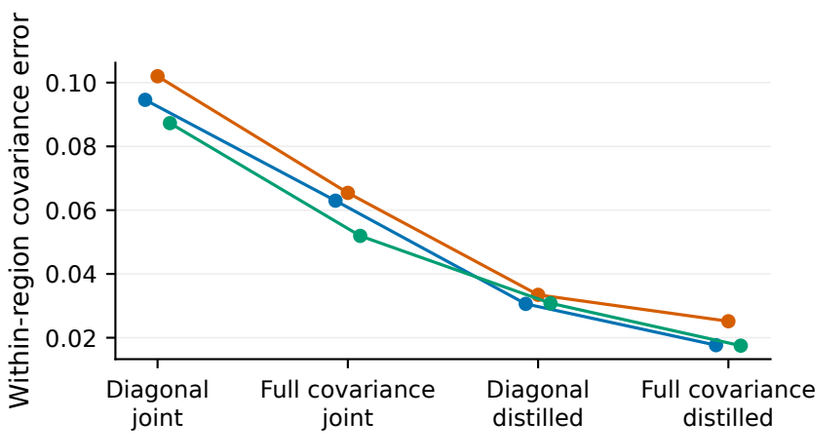


P0 exposed regression

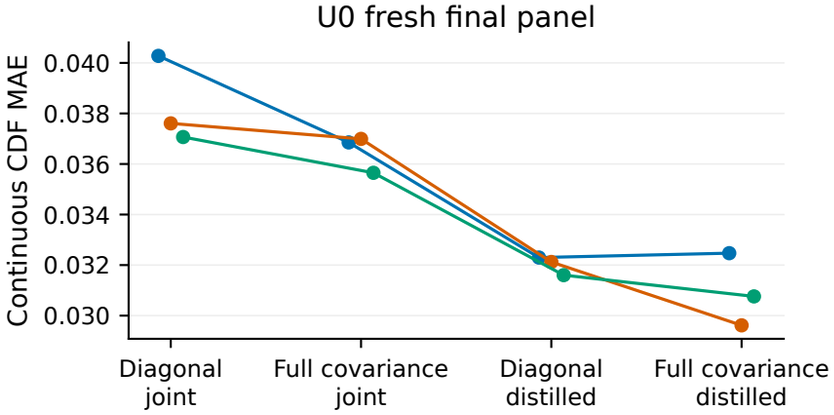


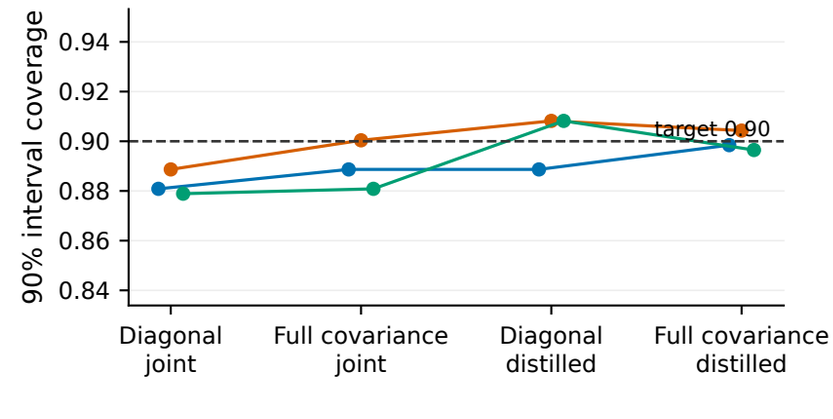


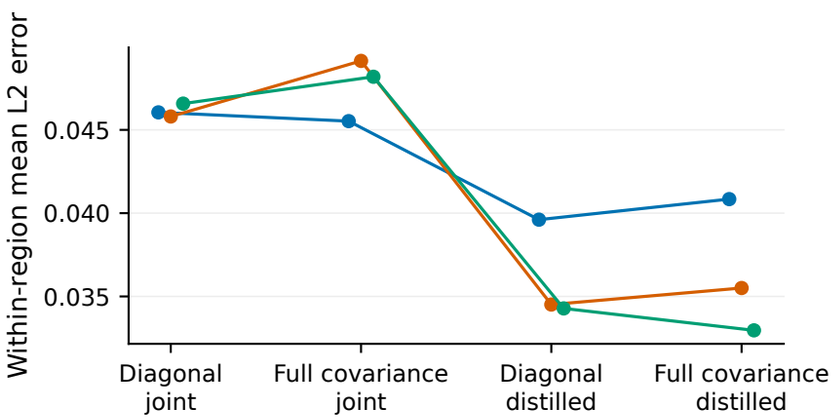


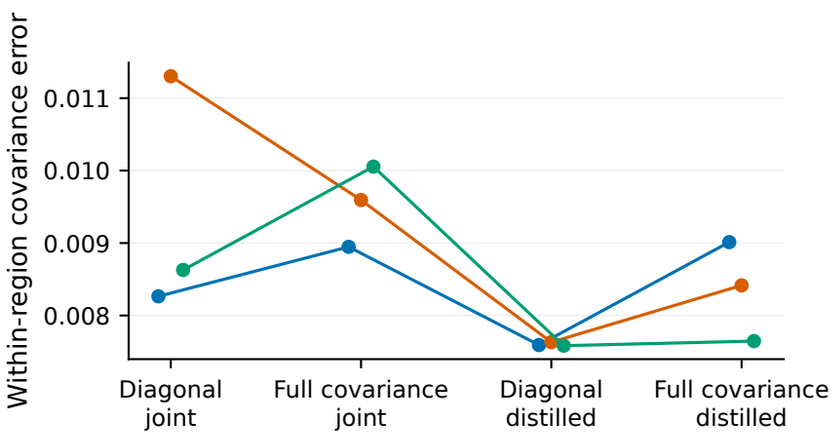


U0 fresh final panel









CDF, tails and within-region target moments use numerically refined references; P0 refinement is bank-interpolated.
Within-region sample moments use 2048 iid draws per observation; their finite Monte Carlo error is recorded in the result tables.
Old U0/P0 panels are exposed regression; the independent final U0 panel is now exposed for future work. No arbitrary-topology imaging claim.
